Queensland Train Manufacturing Program

Program overview

The Queensland Government's Queensland Train Manufacturing Program (QTMP) was established to meet the increasing demand for rail transport in South East Queensland over the next 10 years.

The QTMP involves the design and delivery of 65 new six-car passenger trains at a purpose-built manufacturing facility at Torbanlea, near Maryborough. Trains will be maintained and stabled at a rail facility in Ormeau, on the Gold Coast.

Construction of the facilities, trains, and maintenance of the fleet will support Queensland jobs now and into the future.

The program brings with it a pipeline of training and development opportunities to bolster Queensland's train manufacturing industry.

Train manufacturing at Torbanlea

Torbanlea's purpose-built train manufacturing facility will include workshops, sheds, offices, parking and an internal commissioning track.

All 65 QTMP trains will be built at Torbanlea and are expected to be in service by 2032.

Rail facility in Ormeau

The Ormeau rail facility includes train maintenance workshops, offices, a train wash and stabling tracks.

The QTMP will deliver

A fleet of 65 six-car passenger trains.

A purpose-built manufacturing facility near Maryborough.

A rail facility (for train maintenance and stabling) in Ormeau.

Job opportunities.

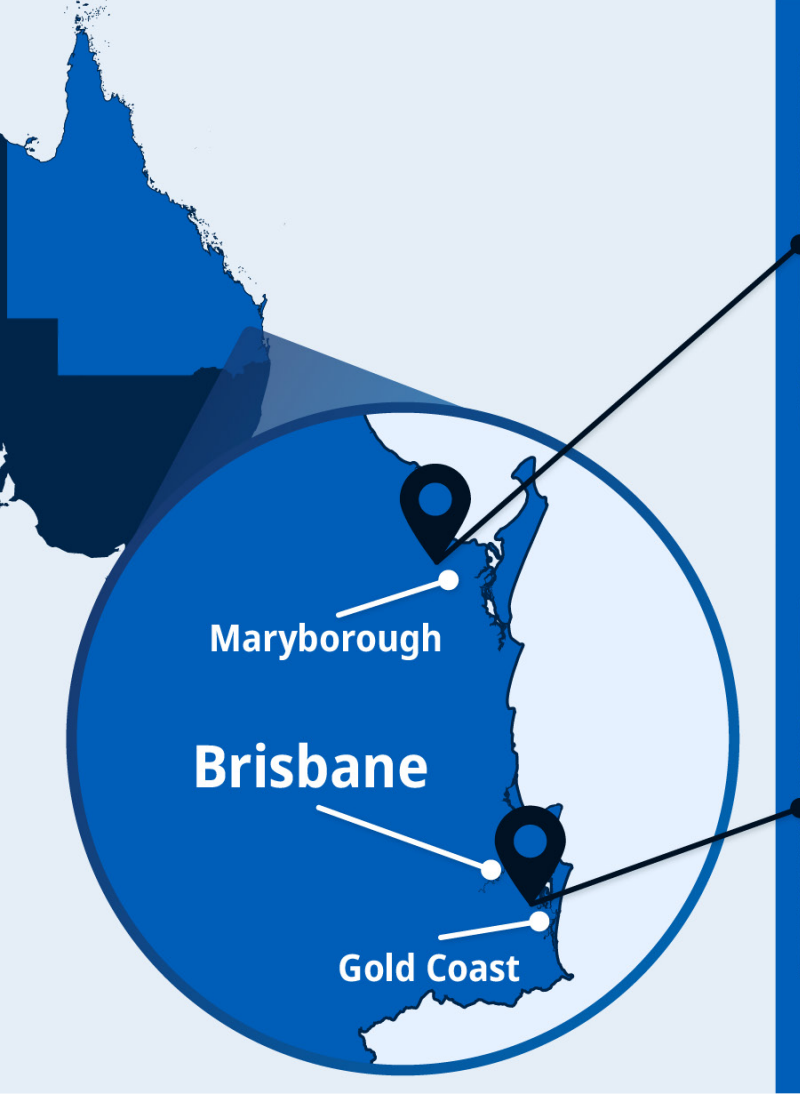

A future-proofed rail network.

Supporting infrastructure to ensure integration with the existing rail network.

DELIVERING FOR QUEENSLAND

Queensland Government

Torbanlea train manufacturing facility

Ormeau rail facility

Working with the community

Working with local communities, Traditional Owners, and stakeholder groups throughout the design, construction and operation of the new facilities is an important part of the process.

We are working with people with diverse accessibility requirements to co-design the new trains to ensure they are compliant, functional and accessible for all passengers.

Supporting infrastructure

QTMP will deliver supporting infrastructure, including road upgrades, rail connection works, train testing infrastructure, additional train stabling and signalling upgrades. This will ensure integration with the existing rail network.
